Education

University of California, Irvine

Irvine, CA

Bachelor of Science in Data Science — GPA: 3.9/4.0

Work Experience

Data Engineering Intern

Irvine, CA

Pacific Life

June 2025 – June 2026

- Designed and maintained a scalable ETL pipeline and underlying data model for **32,000+** records using Docker, Microsoft SQL Server, and Snowflake, supporting downstream reporting and analytics needs
- Developed automated data validation and monitoring workflows using SQL, AWS S3, Lambda, and Power Automate, improving data quality and reducing technical debt by **\$40K+**
- Reduced pipeline runtime by **40%**, ensuring data availability within SLA windows for Power BI dashboards
- Implemented CI/CD pipelines with Azure DevOps and Git to test, version, and deploy data workflows reliably

Data Engineering Intern

Irvine, CA

UCI Health

January 2025 – March 2025

- Developed SQL-based ETL pipelines and data models to integrate stroke data into the UCI Health Data Warehouse
- Designed transformations, validation logic, and quality checks to ensure consistency and accuracy across datasets
- Built reusable R Markdown workflows to standardize data cleaning and preprocessing for research teams

Data Science Intern

Sacramento, CA

California Department of Public Health

January 2025 – June 2025

- Built distributed ETL pipelines using PySpark and SQL on Databricks to support analytical modeling on **100,000+** records from a cloud-based data lakehouse
- Optimized data transformations and queries to improve pipeline performance and scalability across large datasets
- Developed Power BI dashboards to surface key metrics across **1,200+** facilities, supporting data-driven decision
- Conducted statistical modeling using logistic regression on **100,000+** records in PySpark, analyzing predictor

Projects

New Tools Radar

- Built an end-to-end ELT pipeline and data warehouse using Python, Apache Airflow, dbt, Docker, and Supabase (PostgreSQL) to ingest, model, and analyze emerging tools data from multiple APIs
- Designed a modular data model with layered transformation architecture (raw → staging → marts), processing 1,000+ records daily through fault-tolerant, quality-checked workflows
- Orchestrated scheduled DAGs in Airflow with dependency management, automated retries, and logging/monitoring to ensure reliable, on-time pipeline execution

Cotality Propensity to List for Rent and For Sale

- Built an ELT pipeline using data from publicly available housing APIs and stored them in BigQuery Tables
- Performed feature engineering and built two LightGBM analytical models to predict propensity to list for rent and sale, achieving AUC-ROC of **0.8576** and **0.8106** — exceeding client benchmarks by **0.20** and **0.09** respectively
- Applied prompt engineering techniques with LLM tools to optimize SQL/BigQuery queries for the ELT pipeline, reviewing all AI-generated code for accuracy and correctness before implementation

Yelp Recommender System (Variational Autoencoder)

- Designed a Variational Autoencoder (VAE) in PyTorch on Yelp data, performing feature engineering and evaluating recommendation quality via reconstruction loss and latent space analysis

Activities

Director of Community Development

Irvine, CA

Data@UCI

June 2024 – June 2026

- Developed and mentored weekly workshops on data science tools and techniques, teaching foundational concepts using R, pandas, Tableau, scikit-learn, TensorFlow, PyTorch, and SQL totaling to over **60+** workshops

Technical Skills

Languages & Libraries: Python, SQL, R, C++, Visual Basic, pandas, scikit-learn, TensorFlow, PyTorch, matplotlib, seaborn, Plotly, HTML, CSS, JS, React, Next.js, C#, Typescript

Data & Cloud: Snowflake, Databricks, dbt, Matillion, Apache Spark, Apache Airflow, Microsoft SQL Server, BigQuery, Redis, MongoDB, AWS (S3, Lambda, EC2), GCP, Docker, Terraform, Power Automate

AI & Tools: LLMs, NLP, A/B Testing, Power BI, Tableau, Jupyter Notebook, Git, GitHub
